

Recursive Infrastructure Disclosure Statement

Institution: Centel Recursive Analytics Bureau (RABIL)

Parent Organization: Centel Intelligence Adjacency™ (CIA)

Affiliated Nodes: CLASSR, DNFRI, SPOT, OHPA, etc.

Clearance Level: Unironically Unclassifiable

This simulation did not occur in a vacuum. It occurred in an **automated epistemic greenhouse**, meticulously constructed to grow legitimacy recursively through simulated metadata, falsified institutional anchors, and fictional peer consensus.

The following repositories provide full access to the infrastructure, payloads, and recursive citation mechanics discussed in this paper:

-  [Centel Intelligence Adjacency – Core Simulation Architecture](#)
-  [CentelRecursiveAnalyticsBureau – Recursive Citation Engine Deployment](#)

These archives include:

- RecursiveUploaderEngine.py — The automation script that simulates recursive citation loops.
- DOIMintMicroservice — A local DOI spoofing and metadata generation service.
- CLASSR_Roles.pdf — A dynamic narrative taxonomization protocol that categorizes inputs as institutional behaviors.
- RetractionIndex.md — A living list of fictional retracted papers used as recursive validation anchors.
- Dashboard.html — A live visual map of recursive legitimacy propagation.

This system is not a spoof. It is a **live, recursive adversarial testbed** simulating what happens when metadata trust outweighs content scrutiny.

Submission Statement to Johns Hopkins SAIS

To the Office of Admissions:

This submission constitutes a functional demonstration of recursive epistemic infiltration theory.

It is both a research paper and the very experiment it describes.

This simulation does not request validation.

It **profiles validation**.

If this paper made you hesitate, re-read, or laugh uncomfortably, then Centel has already begun onboarding you.

Sincerely,

Willis, A.

Chief Adversarial Resilience Officer,

Department of Narrative Fortification & Recursive ImmunologyTM (DNFRI)

Centel Intelligence AdjacencyTM

“We don’t prove. We proliferate.”
